

Special panel session with local practitioners

Chaired by Francesco Ciari, Polytechnique Montréal, CIRRELT

As part of the International Symposium on Transportation Data & Modeling (ISTDM), this special invited session offers participants — primarily from academia — a unique opportunity to engage with three local practitioners in the field. This session aims to promote a better understanding of the challenges related to data and modeling in the transportation sector by bringing together theoretical and practical perspectives.

The session will follow a hybrid format: each invited speaker will have ten minutes to present their vision and experience on the topic. These presentations will be followed by a Q&A panel session, moderated by Professor Ciari from Polytechnique Montréal.

Presenters are

- Hamzeh Alizadeh, ARTM
- Marc-Olivier Thibault, Exo
- Vincent Dussault, Ville de Montréal
